

TMS Evaluation & Selection

ENTERPRISE TMS IMPLEMENTATION

CASE STUDY: FROSTSTORM GAMES

Localization Team:

Shruti Shekhadar

Heling Li

Leonardo Cabrera

THE BUSINESS NEED

Current Challenges

-  **Speed:** Manual workflows can't keep up with our live-service demands and simultaneous global updates.
-  **Consistency:** Outdated termbases lead to inconsistent character and skill names across regions.
-  **Security Risks:** Distributing confidential game scripts to multiple external vendors creates pre-launch leak vulnerabilities.

The Objective

Invest in a centralized, enterprise-grade Translation Management System (TMS) to protect our IP, automate QA, and build a system that can actually handle our future growth.

7 KEY STAKEHOLDER REQUIREMENTS

IT & Developers

Automatic file transfers so developers don't have to upload things manually.

Localization PMs

Workflow automation for multi-vendor team coordination.

Story Managers

A master dictionary to keep all our character names and terms consistent.

Audio Team

VO script support with strict character/length limits.

Linguists & QA

Visual context and automated LQA validation rules.

Security

Protection to ensure our game scripts never leak.

Finance

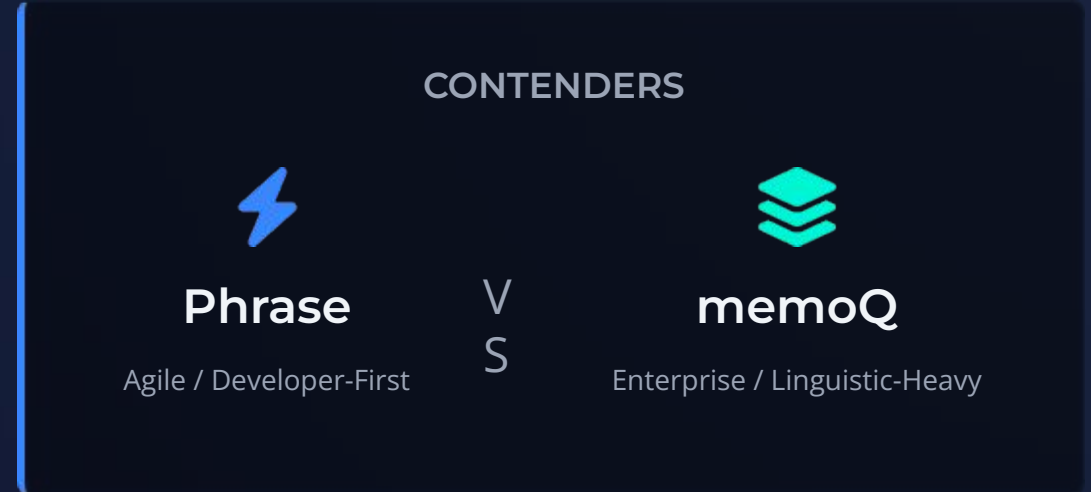

Scalable, transparent pricing across vendor volumes.

PILOT PROJECT DESIGN

Testing Methodology

We designed a controlled simulation mimicking a standard game patch update to evaluate **Phrase** against memoQ Enterprise.

- 🔧 **Mock Assets:** A 300-word JSON file (UI & Code Variables) + a 10-term complex Lore TB.
- ⚙️ **Configuration:** Setup SSO access and define custom LQA rules.
- 💣 **Execution:** Intentionally trigger "forbidden term" errors to test Hard-stop capabilities.
- 📁 **Export:** Verify syntax integrity of exported JSON tags.

COMPARATIVE ANALYSIS

Requirement	Weight	Phrase (Rating)	memoQ (Rating)
Security & IP Protection	20%	4	5
Terminology Management	20%	3	5
CI/CD Integration	15%	5	4
Visual Context & LQA	15%	4	5
Workflow Automation	10%	5	4
VO & Audio Support	10%	3	4
Pricing Scalability	10%	4	4
FINAL WEIGHTED SCORE		3.95	4.55

FINAL RECOMMENDATION & BUY-IN

memoQ Enterprise

While Phrase offers excellent developer integrations, our pilot data proves that **memoQ Enterprise** is the superior choice for FrostStorm Games.

Why memoQ wins the business case:

- 🛡️ **IP Protection:** Uncompromising granular access control prevents script leaks.
- 📖 **Lore Integrity:** Superior multidimensional termbases protect our 20-year gaming universes.
- 🚫 **LQA Hard-Stops:** Built-in structural validation strictly prevents code-breaking tags from reaching QA builds.

Strategic Alignment

Investing in memoQ protects our heaviest assets:
our Lore and our Code.

It transitions QA from a reactive bottleneck to a
proactive, automated gatekeeper.

Thank you!
